Career Objective

I am currently in my final year of Software Engineering and want to delve into web development. I love coding and am interested in seeing the inner workings of full fleshed systems out in the working world and seeing the work that is put into building up to that point.

I enjoy learning new skills, solving problems, analysing solutions and how things work in general. This translates to coding, inspecting existing code and learning how they work. I like working in teams and sharing cool ideas with others and have a hand in helping create something worthwhile.

Skills Summary

Problem Solving

I am a logical thinker. When faced with a problem I first try and understand by researching everything I can about the topic, then I investigate the causes and then find possible solutions. Working out problems in coding can be quite challenging and often frustrating but it is rewarding once I am able to work out the solution.

Communication

I like to communicate with others, especially in a team setting. Sharing ideas is a good way for me to get my thoughts out and think from different perspectives. Keeping others updated is also a good way for me to stay on track. Projects where I have worked in a team is a dynamic which I quite enjoy.

Self-motivated

I keep myself motivated through a tough and challenging project by breaking it down and then work on smaller problems. Having a start and a good idea of the layout of the problem is a very good motivator and makes me look forward to completing the task. In my current studies there were a couple of projects which looked daunting when I read the brief but each section I started on made me more and more motivated to complete them.

Work Experience

Software Developer Intern

Worked as an intern at Connect – Digital Services at the University of Auckland where I mainly did backend web development.

Babysitter

Was responsible for taking care of two children, cooking them meals and taking them out for bicycle rides.

Cleaner
Cleaned offices and other workplaces throughout Auckland CBD. Worked with other people and sometimes worked alone.

Education

University of Auckland, New Zealand - (Mar 2020 – Nov 2023)
Bachelor of Engineering (Honours) in Software Engineering

Technical Skills

JavaScript

- Gained experience in web development in my internship.
- Used JavaScript in most of my final year software projects.

Java

- Gained experience in object-oriented programming by developing a game with a GUI object-oriented design for university projects.
- Used Java for developing a simple Android application.

Others: TypeScript, React, Angular, Express, Python, Android, C#, Unity, Unity VR

Databases: MongoDB, Firebase, DynamoDB

Project Experience

MAD Computers
A simple android app that simulates buying products online, with a shopping cart and order system. A learning experience using Android Studio and Firebase. Coding language – Java.

Angular Project
Project where I had to learn Angular and demonstrate it in a video presentation.

Kuri Nui
My Capstone project where we had to build a website to display and record SPCA dogs. I mainly handled backend and security using Firebase.

Kachick
A location-based game developed using MERN stack. I mainly worked on the backend.

Unity VR Project
Made a VR golf game (with custom functionality) in Unity and C# for a research project.

Flight Booking
A Maven project for gaining knowledge in RESTful API, jpql and using Java alongside them to code a web service that simulates booking flight seats.

Kemu Kupu
A spelling game using both the English and Māori languages. This was a group project using Java and Bash script for the functionality, and JavaFX framework for the design.

Custom Shell
A simple shell written in C language. It can run normal Unix commands, handle pipelines, run the history command along with the job command, and signal handling.

File Sync
Python written program that synchronises two chosen directories (all files within) and any subdirectories.

Interests

I love reading books and graphic novels. My favourite book is the Percy Jackson series. I also enjoy playing video games and board/card games, my current favourites are “Minecraft” and “Exploding Kittens” respectively.
